

WHAT IS CLAIMED IS:

1. A ceiling fan blade mounting assembly comprising:

a mounting bracket having a positioning portion and a mounting portion, and an arm disposed between the positioning portion and the mounting portion for connecting them together, the positioning portion
5 fixed to a ceiling fan's base body;

plural fixing elements secured on the mounting portion of the mounting bracket, one of the plural fixing elements located close to a position where the mounting portion and the arm are connected;

10 an elastic plate having protrusive latch hooks which are located in symmetric manner, the elastic plate fixed by the fixing elements and located close to the position where the arm and the mounting portion are connected, and two wing portions of each elastic plate located at both sides of the arm of the mounting bracket;

15 a ceiling fan blade provided at an end thereof with plural holes, the holes each having a gap, and the gap of the respective holes directed in the same direction;

by such arrangements, the respective holes can be aligned with the fixing elements, and then after an angle of rotation, the respective
20 fixing elements moved into the gap of the respective holes, meanwhile, the latch hooks at an end of the elastic plate engaging in the holes, whereas a lower surface of the ceiling blade pressing against the latch hooks at another end of the elastic plate.

2. The ceiling fan blade mounting assembly as claimed in claim 1, wherein the respective fixing elements are provided with a washer.
